

← Developer Options

Debugging

Allow screen overlays on settings

Allow apps that can display over other apps to overlay settings screens

Allow mock modem

Allow this device to run mock modem service for instrumentation testing. Do not enable this during normal usage of the phone

USB debugging

Revoke USB debugging authorisations >

Wireless debugging

Debug mode when Wi-Fi is connected

Disable adb authorisation timeout

Disable automatic revocation of adb authorisations for systems that have not reconnected within the default (seven days) or user-configured (minimum one day) amount of time.

Enable view attribute inspection

Select debug app

No debug application set >

Flutter IDE (Android Studio) showing the code for a Flutter application named `flutter_application_1`. The file `main.dart` is open, displaying the following code:

```
lib > main.dart > _TodoPageState > build
1 import 'package:flutter/material.dart';
2
3 void main() {
4   runApp(const MyApp());
5 }
6
7 class MyApp extends StatelessWidget {
8   const MyApp({super.key});
9
10  @override
11  Widget build(BuildContext context) {
12    return MaterialApp(
13      debugShowCheckedModeBanner: false,
14      title: 'To-Do App',
15      theme: ThemeData(
16        colorSchemeSeed: Colors.blue,
17      ), // ThemeData
18      home: const TodoPage(),
19    ); // MaterialApp
20  }
21 }
22
23 class TodoPage extends StatefulWidget {
24   const TodoPage({super.key});
25
26   @override
27   State<TodoPage> createState() => _TodoPageState();
28 }
29
```

The code defines a `MyApp` class that extends `StatelessWidget` and a `TodoPage` class that extends `StatefulWidget`. The `MyApp` class has a `build` method that returns a `MaterialApp` widget. The `TodoPage` class has a `createState` method that returns a `_TodoPageState` object.

The IDE interface shows the Explorer view on the left with the file structure of the application. The bottom status bar indicates the current line and column (Ln 129, Col 27) and the Dart language. A red arrow points to the `createState` method in the `TodoPage` class.

System tray information: 20:56, 06/25/2026. Background application: FIFA World Cup 2026...
